Education

Cornell University

Aug. 2021 – May 2025

Bachelor of Science in Computer Science, Minor in Mathematics

Ithaca, NY

Experience

Amazon

Jul. 2025 – Present

Software Development Engineer I

New York, NY

- Built an MCP tool evaluation framework leveraging AI agents to automate response grading, establishing regression testing for prompt changes
- Won a hackathon for an AI-powered feedback tool that generated context-aware multiple choice questions, increasing feedback granularity on the team's agent development platform used across Amazon
- Led the consolidation and deprecation of legacy petabyte-scale data engineering platforms, reducing operational load by 1 SDE-year annually and simplifying onboarding for dependent teams
- Built networking canaries leveraging static config analysis and live traffic probes to surface issues across 25,000+ teams, reducing detection time from hours to minutes

Cornell University

Aug. 2023 – May 2025

Teaching Assistant

Ithaca, NY

- Awarded CIS TA Recognition Award for outstanding teaching across 4 semesters
- Taught Discrete Structures (Fall 2023), Analysis of Algorithms (Spring 2024, Fall 2024), and Operating Systems (Spring 2025)

Amazon

May 2024 – Aug. 2024

Software Engineer Intern

New York, NY

- Developed dataset correctness monitoring using AWS Glue, Lambda functions, and CloudWatch
- Saved 5+ SDE hours/month of alarm debugging by building dataset health metric dashboards
- Eliminated 25+ tickets/month with alarm consolidation and the deprecation of old systems

Amazon

May 2023 – Aug. 2023

Software Engineer Intern

New York, NY

- Developed Grafana dashboards adopted across Amazon organizations for monitoring authentication metrics
- Architected a microservice on EC2 and S3 using Amazon Redshift telemetry data, enabling Amazon services to assess Transitive Authentication adoption with sub-second responses

Niemack Research Group

May 2022 – Jun. 2023

Programmer Analyst

Ithaca, NY

- Engineered an automated data pipeline from telescope parameters to cosmological parameter constraints
- Published open source code generalizable to other telescope designs and observing locations
- Generated simulated sky maps using calculated sensitivity data to validate pipeline outputs

Projects

Cornell Autonomous Bicycle

Oct. 2021 – May 2025

Team Lead

Ithaca, NY

- Managed 15 members across software, mechanical, and business, coordinating hardware procurement, fabrication timelines, sponsor relations, and a public showcase to the Cornell community

Software Lead

- Integrated vision, navigation, and controls systems including LiDAR-based perception, linear quadratic regulators for balance control, and ROS-based hardware interfaces

Navigation Lead

- Researched, designed, and implemented reinforcement learning algorithms for obstacle avoidance including Q-learning, and a random forest model to optimize state space sampling density

Navigation Developer

- Implemented path following and collision avoidance algorithms and integrated bicycle hardware with navigation software using ROS

Technical Skills

Languages: Java, TypeScript, Python, SQL, Scala, Kotlin, Go, Bash, Ruby, JavaScript, HTML/CSS, OCaml, C, C++

Frameworks: AWS CDK, Coral, Smithy, Spark, Docker, React, ROS, NumPy

Technologies: AWS (Lambda, DynamoDB, Kinesis, Step Functions, VPC, Route 53, and more), Grafana, Git, Protobuf
